

THINK CONNECTIVITY CAN'T WORK FOR CASH?

THINK AGAIN

- On-demand diagnostics
- Real-time alerts
- Smart troubleshooting
- Preventative maintenance

Save time. Save resources. Save money.

IT'S CASH

ONLY SMARTER

Connectivity can mean a lot of things, but when we talk about getting connected, we mean more than just hooking up to WiFi. With the power of connectivity you integrate your machines, hardware, and other devices with the Internet of Things. This means they can talk to each other, and, in turn, more easily relay information to you.

You can achieve this with just three simple steps.

The Hardware

The Talos™ bill validator and the Gryphon™ coin changer, enabled for Bluetooth compatibility, function as the next generation of cash hardware solutions, only smarter. Equipped for connectivity, your payment hardware is ready to connect and share data.

The Connection

With the integration of our Synq™ Bluetooth module, your hardware is activated to communicate via Bluetooth, sharing device data and diagnostics.

The Application

Powered by Synq, the Simplifi™ mobile app provides operators with instant, on-site machine data, diagnostics, and solutions with step-by-step troubleshooting instructions and videos.
